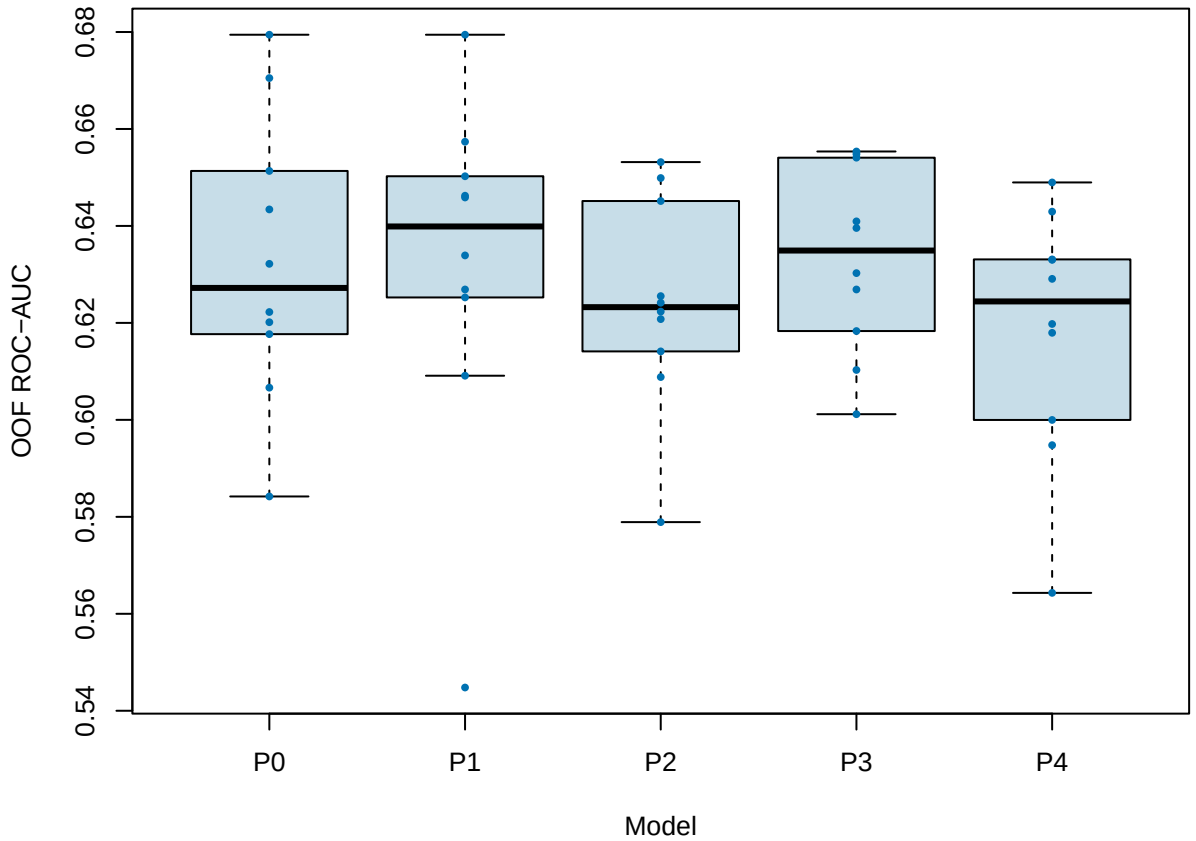
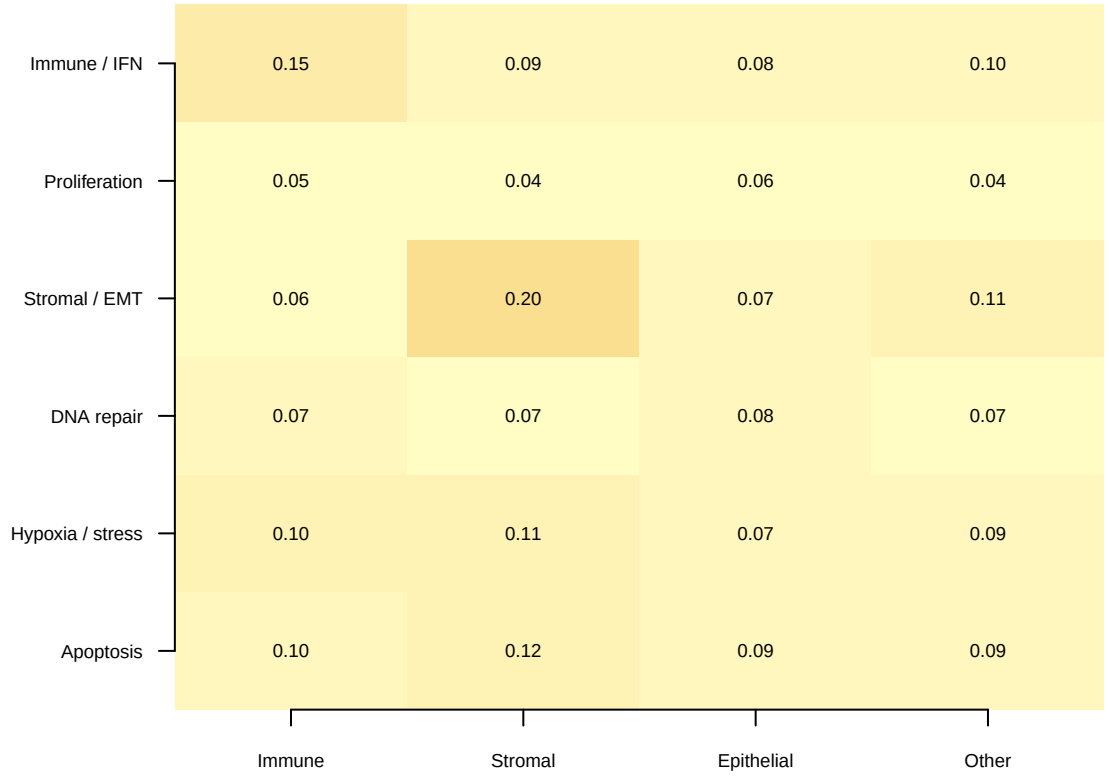
A Secondary prediction: 10 repeats



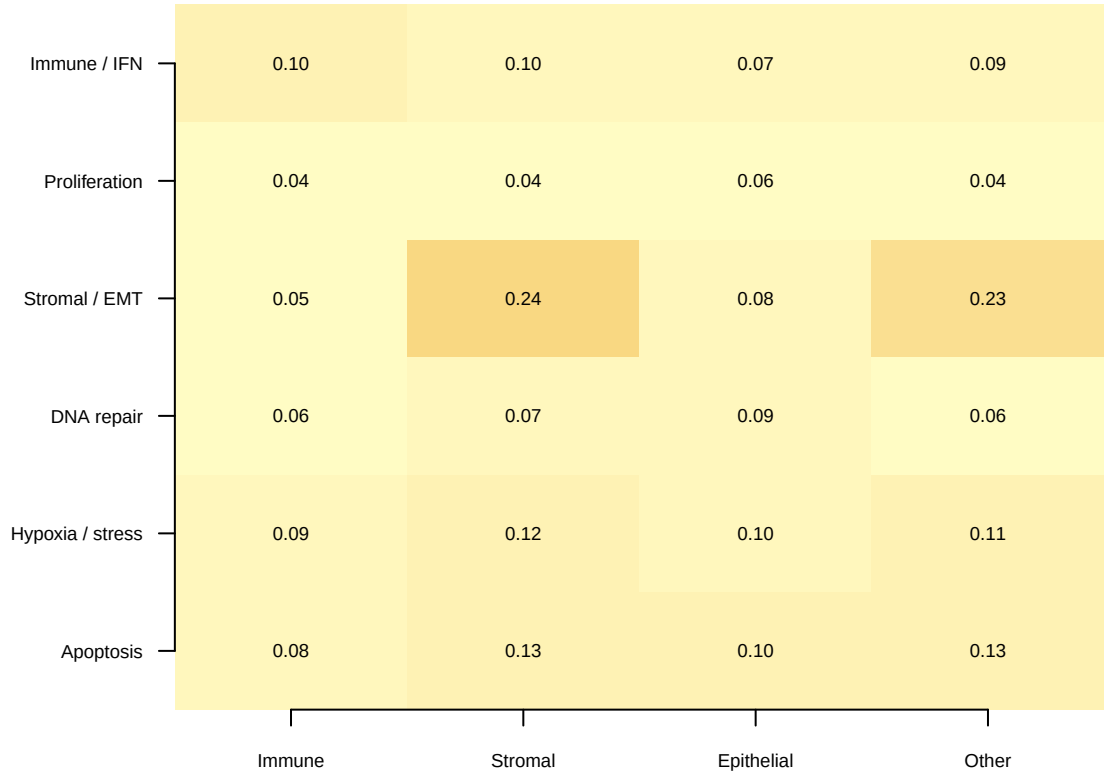
B Pre: median UCell

Three patients; patient−compartment summaries require >=50 cells



C Post: median UCell

Three patients; patient−compartment summaries require >=50 cells



D Final evidence boundaries

150 NeoTRIP patients; six prespecified pathways

0 multiplicity−confirmed pathways

4 hypothesis−generating; 2 not robust

No consistent incremental predictive gain

Single−cell: descriptive only; scoring discordance retained

No clinical utility or independent replication claim
